

SafeNet Protects Government Data

SafeNet enables government agencies to ensure data privacy, meet compliance requirements, and protect critical data against both internal and external threats. SafeNet provides the only end-to-end enterprise data protection solution that secures data at rest, data in transit, and data in use - across application, device, network, and database layers.

SafeNet's extensive range of security products provides NSA-certified and NIST-certified voice, data, and video networking, and information security solutions. The products consist of Type 1 (classified) and Type 3 (SBU) encryption and authentication solutions to protect communications, sensitive and classified data, intellectual property, and digital identities.

As a technology leader, SafeNet works with customers, partners, and systems integrators to develop innovative information security solutions for all areas of government. We bring our years of experience and knowledge to help solve the unique challenges faced by these organizations. We continue to invest in high-assurance development of information assurance technologies, secure voice and links, networking solutions, and secure computing and data systems.

Benefits

Comprehensive data protection suite

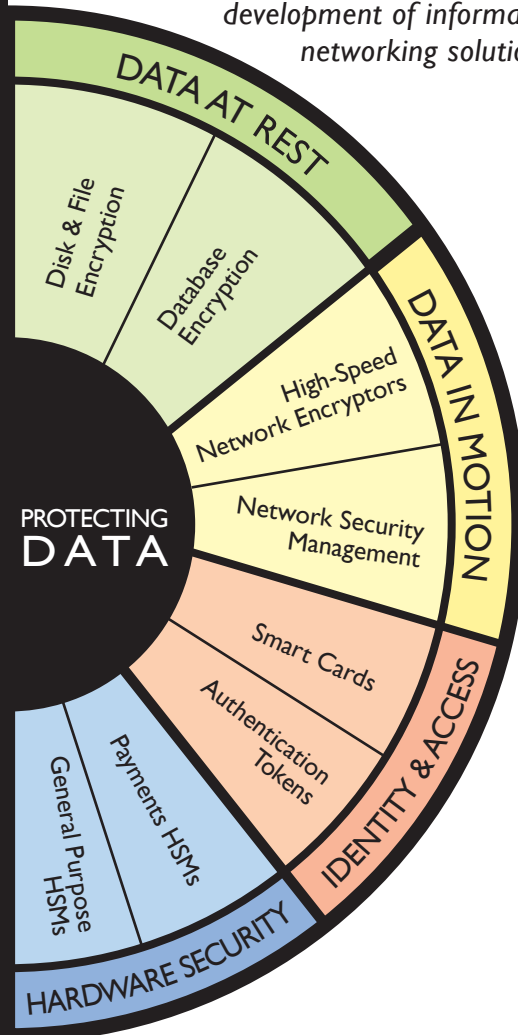

Best protection for sensitive data at rest, in transit, and in use

Easy to integrate and manage for lowest total cost of ownership

Highest performance and reliability for uninterrupted business processes

Central policy management and audit reporting

24/7 support

Disk & File Encryption

SafeNet provides the most secure and cost-effective data protection for disk, file, and removable media.

Database & Application Encryption

SafeNet DataSecure is the most secure, fastest to implement, and easiest to manage enterprise database and application protection solution available.

High-Speed Network Encryption

SafeNet high-speed network encryptors combine the highest performance with the easiest integration and management for robust protection of data sent over high-speed WANs.

Identity & Access Management

SafeNet USB tokens and smart cards provide the most advanced authentication technology for secure access and protecting digital identities.

Hardware Security Modules

SafeNet's Hardware Security Modules are the fastest, most secure, and easiest to integrate solution for protecting cryptographic keys, identities, applications and transactions.

Disk & File Encryption

SafeNet ProtectDrive
SafeNet ProtectFile

SafeNet's disk and file encryption solutions address the need to secure sensitive data residing on company laptops and mobile storage media through robust encryption. SafeNet solutions enable government agencies and enterprise companies to not only deploy the most trusted security available, but also to minimize the cost of ownership significantly by leveraging existing central management systems, such as Active Directory.

Database & Application Encryption

SafeNet DataSecure
SafeNet EdgeSecure
SafeNet KeySecure

SafeNet DataSecure allows government agencies and enterprise companies to ensure compliance and limit liabilities by protecting any sensitive data accessed by employees, customers, or third parties. With SafeNet DataSecure, organizations can protect critical data from both internal and external threats, ensure compliance with regulatory and legislative mandates for security, and mitigate the risk of data theft.

High-Speed Network Encryption

SafeNet Ethernet Encryptor
SafeNet SONET Encryptor
SafeNet Link Encryptor
SafeNet Frame Encryptor
SafeNet ATM Encryptor
SafeNet Conversion Encryptor
SafeNet SMC

SafeNet's complete family of high-speed WAN encryptors provide the fastest and easiest way to integrate robust FIPS-certified network security to protect mission-critical data. Gigabit-speed throughput and lowest latency make SafeNet's encryptors the ideal solution for protecting massive amounts of data in transit.

Identity & Access Management

SafeNet iKey USB Tokens
SafeNet Smart Cards
MyID Management Console

SafeNet Smart Cards and SafeNet USB tokens are secure authentication devices that can hold users credentials, such as passwords, keys, certificates, or biometrics in a highly secure fashion.

Hardware Security Modules

SafeNet Luna XML
SafeNet Luna SA / SP
SafeNet ProtectHost EFT
SafeNet Luna PCI / PCM

By safeguarding the cryptographic keys that are at the heart of any encryption-based security solution, SafeNet HSMs provide reliable protection against compromise to ensure regulatory compliance, reduce the risk of legal liability, and improve profitability.
